

WoundExpert[®] Physician Dictation

Technology for Your Workflow

WoundExpert's Electronic Medical Record (EMR), a 100% paperless charting solution, now offers physicians a choice for documentation: traditional keyboard data entry or the new Physician Dictation module, which allows physicians to dictate, capture, translate, and edit content directly into the medical record in real time through voice recognition software. This user friendly method of data input eliminates the need for a separate transcriptionist service and the related delays in finalizing patient documentation common with traditional dictation services.

Benefits of WoundExpert Physician Dictation include:

- » Cost savings of up to 80% as compared to other outsourced dictation and medical transcription services
- » Time-saving alternative to physician workflow within WoundExpert
- » Seamless integration into WoundExpert documentation allowing a faster, more efficient creation of each patient's Progress Note
- » Elimination of billing delays by facilitating real-time turnaround of dictation

The Physician Advantage

Physician users will be able to generate a patient's complete Progress Note by speaking naturally on this specially designed dictation form, accessed directly through the WoundExpert Visit Details screen. The form provides playback capability, straightforward edit controls, and a SOAPP template format. The Dictation Work List offers a convenient, single screen option to batch dictate Progress Notes, with the ability to view the patient's medical record while performing dictation. The module includes the option to make edits through either voice commands or via keyboard shortcuts.

Not only will the dictation module improve and adapt to your physicians' dialect, grammar preferences, and dictation styles as they increase their usage of the dictation module, but its library of wound care terminology also increases as more WoundExpert users dictate their Progress Notes. Additionally, the module includes the ability to insert "Macros" for commonly dictated text.

WoundExpert Physician Dictation is a hosted Software as a Service (SaaS) application.

- » Out-of-the-box Speech to Text dictation capability integrated to individual WoundExpert forms
- » Live customer support including application installation and ongoing support
- » Robust medical dictionary
- » Ongoing software updates and support

Enhancing the Electronic Medical Record through Speech Understanding™

WoundExpert Physician Dictation was developed in partnership with M*Modal, an industry leader in speech recognition technology. M*Modal's Speech Understanding™ technology blends advanced speech recognition and natural language understanding technologies to convert narrative dictation to structured data and meaningful clinical content that significantly enriches electronic health record systems.

The module provides the same speech recognition technology used by many of the nation's top transcription and EMR companies, as well as a library of medical terminology acquired from over 200,000 users.

For more information about adding the Physician Dictation module to your configuration, contact our Client Services team at feedback@woundexpert.com or call 800.411.6281, Option 2.
